

5 ABSTRACT OF THE DISCLOSURE

 A cosmetic composition and method for reducing the appearance of pores.
The composition is based on a silicone elastomer or a water soluble or dispersible
polymer and light scattering particles, and having a specified unique rheological
10 profile. The inventive compositions and methods deliver an improvement in
appearance of pores of at least about 2, preferably at least about 4, as measured
by the Pore Ruler. Pores appear less significant and smaller in size, while natural
skin tone is maintained.
